ticket**

Icebreaker

5 minutes

Question:

After a long day of classes and/or work, it's important to have routines to relax to. What are some of your favorite past times (TV shows, reading, hobbies, sports, etc.)?

Answer:

Share your answer in the Zoom chat, emoji react or comment to the ones you have in common or seem interesting to you!

Your Feedback

Glows

- + Tons of feedback responses from day 1!
- + Breakout rooms went smoothly.
- + Students gave each other shoutouts for being supportive and friendly

Grows

- Breakout room instructions weren't clear. Will be more structured after today!
- Students looking forward to adaptive pacing.
- Intro day felt slow to some students.

Announcements & Reminders

Don't Forget Cameras On!

You will be removed from today's session if you are not on camera and are unresponsive.

You will be unable to return to today's session if you are removed.

Choosing Your Breakout Room

1. We'll share the link to the entry ticket so you can indicate what unit you are on.
2. We'll create breakout groups based on the unit you selected.
3. When it's Collaborative Problem Solving time, we'll share the room assignments and demonstrate how to get to your room.

30 minutes

The UMPIRE Strategy

UMPIRE

UMPIRE

Understand the Problem

- * Understand what the interviewer is asking with clarifying questions
- * Generate basic sample input and output
- * Explore more unusual edge cases
- * Explore tradeoffs (memory, performance, code simplicity)

Plan the Solution

- * Describe your overall approach in one or two sentences
- * Write down the steps in English
- * Each step should be simple and clear

Implement the Solution

- * Translate your plan into code.
 - A clear plan should be relatively easy to translate. If it's hard to translate, the plan probably isn't good enough.
- * Look up any basic Python that you need.

Instructor Demo

20 minutes

Let's see how we can use UPI to help us solve a problem.

Instructor Demo

Write a function **above_threshold()** that takes in a list of integers **nums** and an integer **threshold** as parameters. The function iterates through the original list and returns a new list containing only numbers that are greater than **threshold**.

```
def above_threshold(nums, threshold):  
    pass
```

Input: `nums = [8,2,13,11,4,10,14]`, `threshold = 10`

Output: `[13,11,14]`

Break Time!

Take 5 mins to step away from the computer. Feel free to turn off your camera and return promptly after 5 mins.

60 minutes

Collaborative Problem Solving

Choosing Your Breakout Room

1. We'll share the room assignments.
2. We'll demonstrate how to find your room assignment and navigate to your room.

Breakout Rooms

55 minutes

1. 🏃 Navigate to your breakout room.
2. 🙌 Introduce yourselves!
3. 🧑💻 Work on the problems for your selected unit.

10 minutes

Wrap Up

One Good Thing

Let's reflect on today's session. Maybe you got a question answered, overcame a specific coding challenge, or learned how to do something completely new!

In the chat, share at least one good thing you've learned or experienced during the session today.

Let's celebrate together!

Session Survey Time!

Final Reminders

- ☐ Finish the problem sets for additional practice
- ☐ Take the weekly HackerRank assessment by Sunday @ midnight
- ☐ Visit a **Study Hall Session** to deepen your understanding, work through challenges, and connect with course material alongside your peers!
