

Getting started with VS Code for Education

This document, while not a comprehensive guide to using VS Code for Education, should help you quickly get comfortable using the new platform. If you have questions or difficulties not addressed in this guide, please seek support from your instructors, Tech Fellows, and CodePath Staff. We're here to help!

VIDEO WALKTHROUGH

- *You can watch a video walkthrough of the new platform by clicking [HERE](#)*

BASIC INSTRUCTIONS

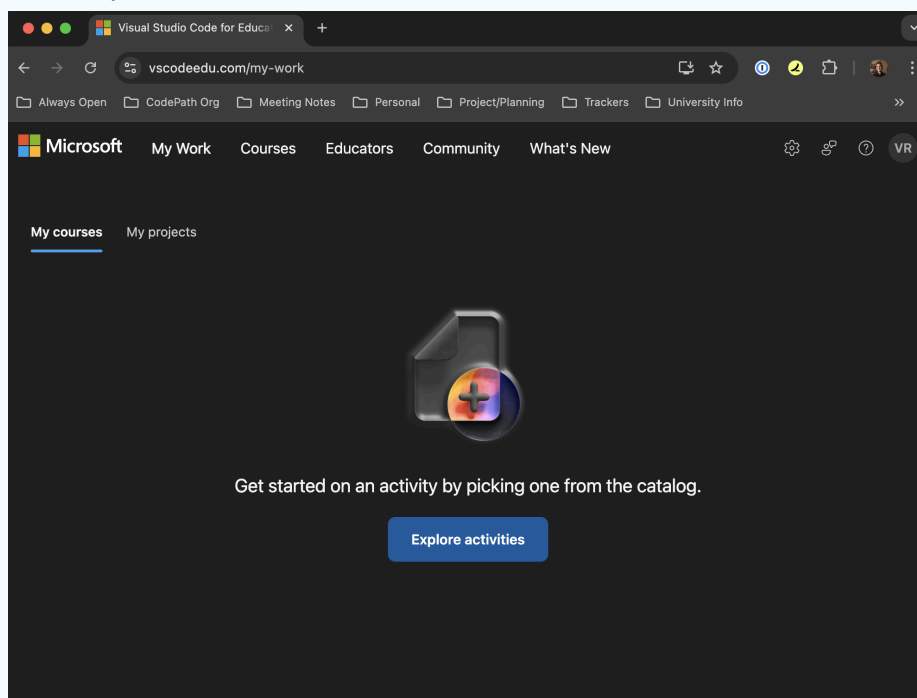

Please register for an account with VS Code for Education at this address:

- <https://vscodeedu.com/>

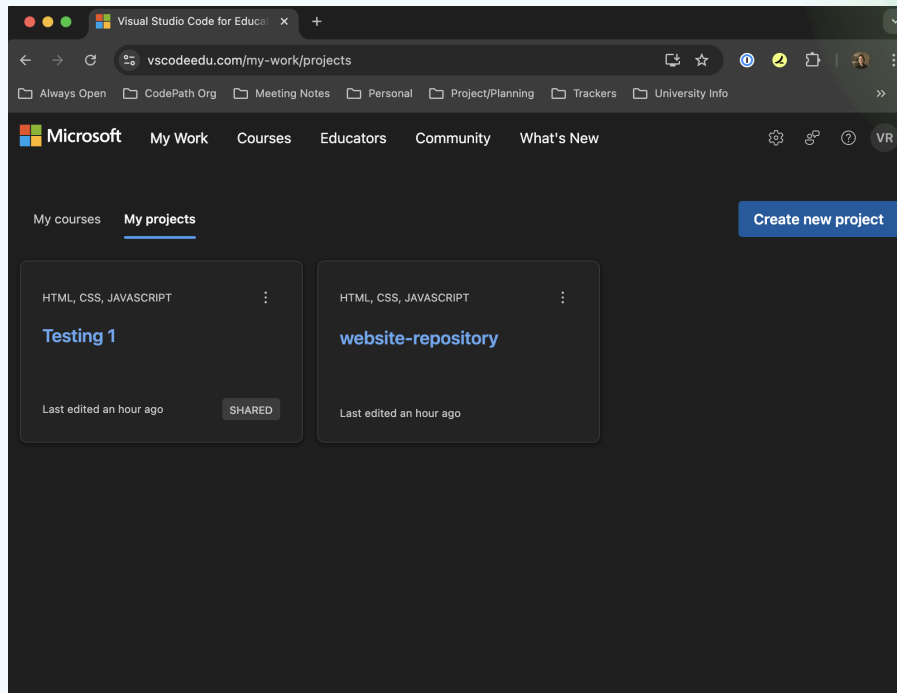

You will need to have either a Google account, or a Microsoft account, to create your free VS Code for Education account.

- Instructions for setting up a Google Account [HERE](#)
- Instructions for setting up a Microsoft Account [HERE](#)

Once logged in to VS Code for Education, navigate to your projects by clicking on “**My Work**” in the top navigation bar.

Click “Create new project”

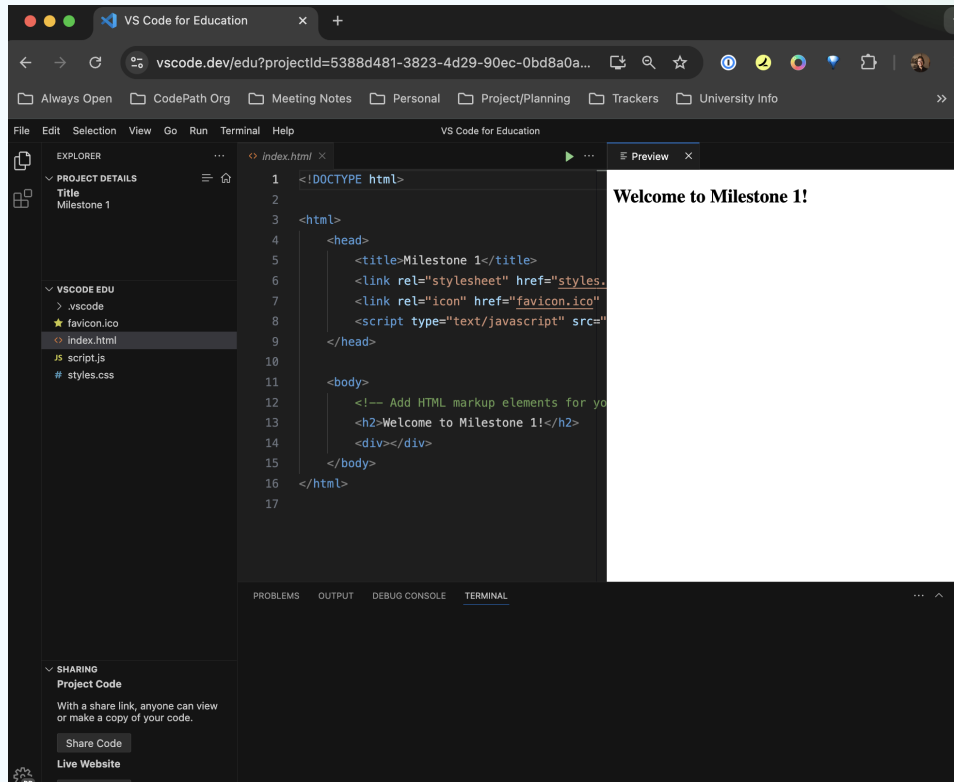

Name your project, using the format "**First Initial + Last Name + _AdvocacyProject**" (ex: JSmith_AdvocacyProject), and select an **HTML5** template.

A screenshot of a 'Create a project' dialog box. The dialog has a title bar with 'Create a project' and a close button. It contains three main sections: 1. 'Project title *' with a text input field containing 'JBaker_AdvocacyProject'. 2. 'Project description' with a text input field containing 'Title = First Initial + Last Name + _AdvocacyProject'. 3. 'Select a template *' with four selectable options: 'HTML5 web site' (Web site using HTML, CSS and JavaScript), 'Python program' (Generic Python program), 'P5.JS web site' (Web site using P5.JS creating coding JavaScript library), and 'Text adventure game' (Text based adventure game in Python). At the bottom of the dialog are two buttons: 'Cancel' and 'Create project'.

Once the project is created, select the new project to open. It will be created from the template with a few items - it should look similar to what you saw in Replit!

There will be an **index.html**, **styles.css**, and **script.js** file created.

NOTE: VS Code for Education creates a .css file under the name “styles.css,” whereas Replit created the file as “style.css”

- When migrating your current work to the new platform, you will need to update all references to your .css file to reflect the new name, or simply **rename the “styles.css” file to “style.css”** Your choice!

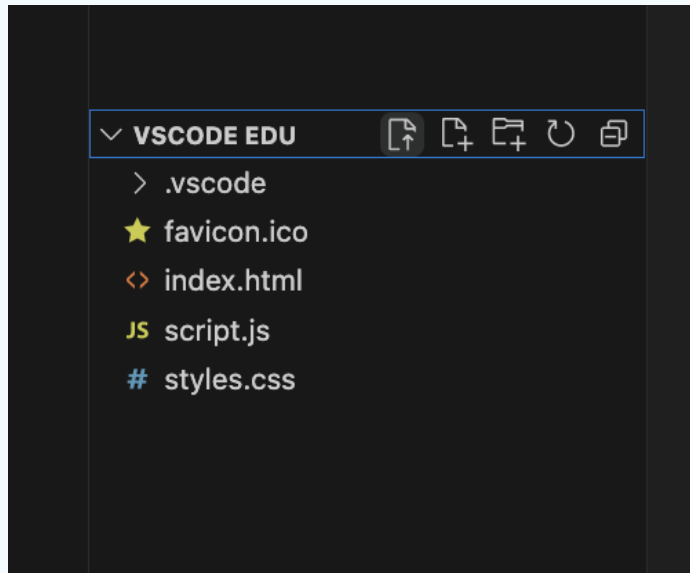

In the bottom left corner, there are sharing options. Click “**Share Code**” to generate a link for sharing your work.

- This link is what you will share in your individual copies of the Google Docs submission template, for submitting Milestones and other assignments

Below the "share" option, there's a "publish website" button - this allows you to publish the website, then share that link with colleagues, instructors and add it to your personal portfolio

HELPFUL INFORMATION AS YOU LEARN THE PLATFORM

You can upload images, videos, or other assets into your projects. It is recommended that you create a new folder at the root level of the main directory, and save assets there, rather than in the root.

Be careful as to where the blue highlight bar is encircling when clicking the icons for file upload, +file, and +new directory. *If the editor has a file highlighted, rather than a directory, it will not allow a file upload.*

To easily return to your personal “**My Work**” page, click the small **Home** icon located near the top left corner of the editor, just underneath the main navigation bar.
